

CSE 111 – Database Systems

Team Evaluation

Grade each team member, including yourself, on a scale from 1 to 15 (1 is the lowest and 15 is the highest). Consider the participation each team member had in each of the project stages. Try to be as objective as possible.

Team member	DB design (1-15)	DB implementation (1-15)	Application development (1-15)	Presentation & demo (1-15)	Overall participation (1-15)
Aditi Kisara	15	15	15	15	15
Alejandro Sanchez	15	15	15	15	15

Using the same scale from 1 to 15, evaluate how proficient you are on the following teamwork skills:

- resolve conflicting design ideas (1-15) **15**
- delegate responsibilities fairly between team members (1-15) **15**
- complete your assigned tasks on time (1-15) **15**

1. What are the most important things you learned about working in a team?

One thing I learned from working in a team is how closely you need to communicate with them. It was important to understand what each member was doing in order to properly integrate other elements of the app.

2. What are the most important challenges of working in a team that you encountered? How did you solve these challenges?

One challenge I encountered when working in a team was coordinating how we would be able to host our web app on to the live web. We ended up using Python Anywhere to host our website, something I had used for another class.

It was also challenging to collect our data. Because there aren't any databases available to us to use, we had to create our own by collected data from Google and creating an excel sheet from scratch.

3. If you would have to do the project again, would you choose the same team?

Yes, I would choose this same team again.

4. Provide any other comments about your team project experience.

Overall, my teammate was a great person to work with. We ended up submitting a project both of us were proud of.
